Anaesthesia Online

For over 30 years, we have been developing innovative and individual solutions for clinical documentation. Our experience and affinity for technology form the foundation of our web-based documentation system for the digital capture of all anaesthesiology-relevant therapy data.

Data entry requires only a current web browser with access to the intranet or the internet. No additional local software installation on client devices is required.

A key strength of our software is its flexibility to be tailored to clinic-specific requirements, with customisations implemented directly by the respective clinical department.

Features

Documentation

- Individual documentation
  - Information
  - Consent
  - Preoperative visit
  - Anaesthesia
  - Blood product protocol
  - Narcotic
  - Recovery room
  - Postoperative visit
  - Questionnaire
- Standard anaesthesia
- Individual plausibility rules
- Transfer documents

Evaluations

- Statistics (including CSV export)
- Specialist (proof of further training)

Advantages

+ Minimal setup and maintenance effort
+ Web-based via PC or tablet (Firefox, Chrome, Safari, Edge)
+ Patient file – all data is presented in a readable overview
+ Time savings through integration of standard anaesthesia procedures and packages (measures, medications, accesses, etc.)
+ Configuration options for quick interface customisation
+ Automatic display of MEDLINQ Anaesthesia Classic forms (EASY) in the patient file
+ Consideration of the core data set 3.01
+ *optional:* Patient portal enables digital, structured and secure pre-entry of relevant patient information
